

OZAN GIRGIN

CLOUD & IT OPERATIONS | AWS | SECURITY | NETWORK & SYSTEMS

ozangirgin.work@gmail.com | LinkedIn | [GitHub Portfolio](#) | Open to international remote opportunities

PROFESSIONAL SUMMARY

Cloud, security, network and IT operations professional returning to the field with earlier experience supporting business networks, Windows systems and end users. Current hands-on portfolio spans seven projects across AWS security and operations, Kubernetes/Docker, Terraform, Python automation, Linux, Active Directory, CI/CD and incident response. Strong troubleshooting foundation with five current industry certifications and a practical focus on secure, reliable operations.

CERTIFICATIONS

- Associate of ISC2 - Passed CISSP Exam
- AWS Certified Security - Specialty
- AWS Certified Solutions Architect - Associate
- Cisco Certified Network Associate (CCNA)
- CompTIA Security+

TECHNICAL SKILLS

Cloud & Security: AWS, IAM, VPC, EC2, S3, KMS, CloudTrail, CloudWatch, GuardDuty, Security Hub, EventBridge, Lambda

Containers & DevSecOps: Kubernetes, Docker, kind, RBAC, NetworkPolicy, Terraform, Checkov, GitHub Actions, CI/CD, YAML

Systems & Networking: Linux, Windows Server, Active Directory, Group Policy, TCP/IP, DNS, DHCP, VLANs, routing, VPN, SSH, SMB/NTFS

Automation & Tools: Python/Boto3, pytest, Bash, PowerShell, Git/GitHub, Wireshark, troubleshooting

PROFESSIONAL EXPERIENCE

Network & Systems Administrator / IT Support | Previous Professional Experience

- Supported Cisco routers, switches, firewalls, Windows systems, users and core network services.
- Configured and troubleshot TCP/IP, DNS, DHCP, VLANs, routing, VPN connectivity and user/network access issues.
- Administered Active Directory, Group Policy and permissions; used packet analysis and structured troubleshooting to resolve incidents.

HANDS-ON TECHNICAL PORTFOLIO - 7 PROJECTS

[AWS Security Detection & Automated Incident Response](#) [GitHub]

- Terraform-defined CloudTrail/EventBridge/Lambda workflow detects public SSH, gathers context and automatically remediates risky ingress with least-privilege IAM and automated tests.

[Secure Kubernetes Deployment & Troubleshooting](#) [GitHub]

- Built a three-node local kind cluster with hardened non-root containers, RBAC, NetworkPolicy allow/deny tests, readiness/liveness probes, resource controls, self-healing, Checkov and GitHub Actions CI.

[Secure AWS Infrastructure with Terraform + CI/CD](#) [GitHub]

- Built a secure VPC, segmented subnets, restricted security groups, S3/IAM controls, encryption and logging as IaC; GitHub Actions runs Terraform validation and Checkov scanning.

[AWS Security Incident Response](#) [GitHub]

- Investigated controlled public-SSH and excessive-IAM changes with CloudTrail, remediated findings, verified the fixes and built a tested Python detector.

[Python IT Operations Automation Toolkit](#) [GitHub]

- Built a Windows monitoring CLI for system health, DNS/HTTPS connectivity, services, event logs and JSON/HTML reporting with pytest coverage.

[Windows Server & Active Directory Lab](#) [GitHub]

- Built a two-VM Windows domain with AD DS, DNS, Group Policy, domain join and role-based SMB/NTFS access validated through allow/deny testing.

[Linux IT Support & Troubleshooting Lab](#) [GitHub]

- Resolved documented Ubuntu Server incidents and automated disk monitoring with Bash, configurable thresholds, logging, exit codes and cron.
