Open to remote opportunities

PROFESSIONAL SUMMARY

Cloud and IT professional returning to the field with earlier experience supporting business networks, Windows systems, and end users. Recently built six hands-on labs across AWS security, Terraform, Python automation, Linux, and Active Directory. Brings strong troubleshooting fundamentals, current cloud-security certifications, and a practical focus on secure, reliable operations.

CERTIFICATIONS

- Associate of ISC2 - Passed CISSP Exam
- AWS Certified Security - Specialty
- AWS Certified Solutions Architect - Associate
- Cisco Certified Network Associate (CCNA)
- CompTIA Security+

TECHNICAL SKILLS

Cloud & Security: AWS, IAM, CloudTrail, VPC, EC2, S3, KMS, CloudWatch, GuardDuty, Security Hub, EventBridge, Lambda
Infrastructure & Automation: Terraform, Checkov, GitHub Actions, Python/Boto3, pytest, Bash, PowerShell, Git/GitHub
Systems & Networking: Linux, Windows Server, Active Directory, Group Policy, DNS, DHCP, TCP/IP, VLANs, routing, VPN, SSH, SMB/NTFS

PROFESSIONAL EXPERIENCE

Network & Systems Administrator / IT Support | Previous Professional Experience

- Supported Cisco routers, switches, firewalls, Windows systems, users, and core network services.
- Configured and troubleshooted TCP/IP, DNS, DHCP, VLANs, routing, VPN connectivity, and access issues.
- Administered Active Directory, Group Policy, and permissions; used packet analysis and structured troubleshooting to resolve incidents.

SELECTED HANDS-ON PORTFOLIO

AWS Security Detection & Automated Incident Response | [GitHub](#)

- Built a Terraform-defined CloudTrail-to-EventBridge-to-Lambda workflow that detects public SSH, gathers incident context, revokes risky ingress with least-privilege IAM, and independently verifies remediation; validated by eight automated tests.

Secure AWS Infrastructure with Terraform + CI Security Pipeline | [GitHub](#)

- Designed a VPC, restricted security groups, secure S3 storage, IAM controls, and flow logging; GitHub Actions runs Terraform checks and Checkov scanning (61 passed checks) without deploying resources or storing AWS credentials.

AWS Security Detection & Incident Response | [GitHub](#)

- Investigated controlled public-SSH and excessive-IAM changes through CloudTrail, remediated each issue, and translated the evidence into a tested Python detector.

Python IT Operations Automation Toolkit | [GitHub](#)

- Built a Windows monitoring CLI for system health, DNS/HTTPS connectivity, services, event logs, and timestamped JSON/HTML reports, with pytest coverage.

Windows Server & Active Directory Lab | [GitHub](#)

- Built a two-VM Windows Server 2025 / Windows 11 domain with AD DS, DNS, Group Policy, domain join, and role-based SMB/NTFS access verified through allowed and denied tests.

Linux IT Support & Troubleshooting Lab | [GitHub](#)

- Resolved five documented Ubuntu Server incidents and automated disk monitoring with Bash, configurable thresholds, logging, exit codes, and cron.
